## Solving Multi-Step Inequalities

Make sense of the problem. What information do you need before finding the minimum number of T-shirts?

### Getting Ready!

Math Club members are selling Pi Day T-shirts for \$7.50 each. The goal is to raise \$500 by Friday. The figure at the right shows how much they have raised by Wednesday. What is the minimum number of T-shirts they must still sell in order to reach their goal? Explain your reasoning.

$$\begin{aligned} \text{Let } t &= \text{t-shirts} \\ 7.5t + 337.50 &\geq 500 \\ -337.50 &-337.50 \\ \hline 7.5t &\geq 162.5 \\ \hline \frac{7.5t}{7.5} &\geq \frac{162.5}{7.5} \\ t &\geq 21.6 \\ \hline &22 \text{ t-shirts} \end{aligned}$$

You solve a multi-step inequality in the same way you solve an equation. You use the properties of inequality to transform the original inequality into a series of simpler, equivalent inequalities.

The properties of inequality are very similar to the properties of equality except for this important difference:

**When you multiply or divide both sides of an inequality by a negative, you must reverse the inequality symbol**

take note

### Key Concept Multiplication Property of Inequality

#### Words

Let  $a$ ,  $b$ , and  $c$  be real numbers with  $c > 0$ .

If  $a > b$ , then  $ac > bc$ .

If  $a < b$ , then  $ac < bc$ .

#### Diagram

Let  $a$ ,  $b$ , and  $c$  be real numbers with  $c < 0$ .

If  $a > b$ , then  $ac < bc$ .

If  $a < b$ , then  $ac > bc$ .

These properties are also true for inequalities using  $\geq$  and  $\leq$ .

(The Division Property of Inequality is similar to the Multiplication Property of Inequality above)
